Intelligent Migration Release Notes

Updated: May 1, 2018

2.0.00.0 Features and Fixed Issues

Integrate Metalogix Expert with Intelligent Migration

Metalogix Expert pre-migration reports can now be run and imported directly from the Intelligent Migration User Interface (UI) provided Expert is installed on the same machine.

Integrate Metalogix Content Matrix with Intelligent Migration

Migration jobs that have been defined and created using Intelligent Migration can now be exported to and run in Content Matrix - SharePoint Edition directly from the Intelligent Migration User Interface (UI).

Additional Interview Questions added

Two sets of additional Interview questions have been added based on the "Sites with Publishing Features" and "Pages with Custom Content Tags" reports.

Improved License Key support

Improved management of Intelligent Migration license keys.

Updated Product and options/configuration button icons

The main Intelligent Migration product icon has been updated as well as some of the related icons for buttons and options within the User Interface.

Auto-populate the 'Web Application URL' field in the connection dialog when connecting to a Web Application

In the connection dialog, once the 'Connection URL' value has been entered for a Web Application scope connection, Intelligent Migration will now auto-populate the 'WebApplication URL' value based on the 'Connection URL' field.

Added a message prompt for users if Intelligent Migration is running and does not detect the minimum required version numbers for Metalogix Expert and Content Matrix

Intelligent Migration 2.0 requires Metalogix Expert to be installed to run a report analysis, and it requires Content Matrix to be installed to export a job configuration. This pop-up message will appear if Intelligent Migration does not detect the minimum required versions of Metalogix Expert (v.4.5.2 or later) or Content Matrix (v.8.7.0.1 or later).

Fixes	Work Item	Case No.
• When an empty report file that has the same name as an existing report file is re-imported to the 'Reports' page, the old report should be deleted from the session and the questions should not be available on the Interview Questions page (since there is no data in the report)	349700	N/A
• If a connection has been made previously with a specific URL, and users go back and modify the "Source URL" value in the 'Set Up Migration' screen, then the report analysis will run against the	351341	N/A

original URL (from the 'Manage Connection' screen) instead of the modified one.		
• No URL validation is made after appending a forward slash to either the Source or Target URLs when both URLs are the same when running a "Paste as Subsite" action.	335961	N/A
• Intelligent Migration application should wait for the install file to fully download before starting an install when updates are detected.	330837	N/A
• If a report has been imported, and the analysis is for it being viewed, if users then import a report with the same name as the one being viewed, then original report remains highlighted and the analysis is shown as blank if the second import is cancelled.	341771	N/A
• If a report has been imported and viewed on the Report Analysis screen, and that report is then overwritten with a different report, the exported Job XML file does not get updated to use the new report.	349162	N/A
